RESEARCH INTERESTS

Brain and Physiological data use for Human Computer Interaction

My research lies in the intersection between Human-Computer Interaction (HCI), Brain-Computer Interface (BCI), and Human Factors. We are currently looking into the integration of non-invasive brain monitoring devices, such as functional Near Infrared Spectroscopy (fNIRS), in the field of HCI. More specifically, I am looking at how we can use such devices to sense physiological responses to human cognition and mental workload, and how we can use this quantitative measure in real time for HCI lab based evaluation settings.

- Continuous involvement with the HCI community (often at ACM CHI - the top conference for Human-Computer Interaction).
- Involved in the Academic Review process for multiple conferences - ACM-CHI 2016, UIST 2016, ACM-CHI 2015, ACM-CHIPLAY 2014, IEEE CASE 2014, IIX2014.
- Memberships - Association for Computing Machinery (ACM), Chartered Institute of Ergonomics and Human Factors
